

COVID-19 – Impact Assessment

Date of Issue:	February 24 th , 2020
Affected Products:	DTA-2172 DTA-2174B

INTRODUCTION

The COVID-19 virus affects the lead time of some DekTec products, because certain components used are produced in China, and delays have been announced for the production of those components.

Most DekTec products are currently unaffected, because DekTec produces its products in the Netherlands and maintains sufficient inventory for 3 months based on a sales forecast.

This assessment provides an overview of the affected DekTec products and the measures that DekTec has taken to mitigate the impact of COVID-19.

COMPONENTS ON DEKTEC PRODUCTS PRODUCED IN CHINA

- Printed Circuit Boards (PCB).
- PCIe card brackets.
- PCIe card covers.

COVID-19 IMPACT ON COMPONENTS SOURCED FROM CHINA

PCBs and PCIe brackets: currently no production delays.

PCIe cards covers: production has been delayed due to temporary closing of the factory. At this moment this factory is operational again.

AFFECTED PRODUCTS

DTA-2172: Currently no stock.

Production run scheduled for the beginning of March: all components are available.

Next production batch will require extra covers and will incur a delay until end of April.

DTA-2174B: Limited stock available

Next production run waiting for PCIe card covers, expected end of March.

MITIGATION

<p>Supply chain problems are under control. All Chinese suppliers are operational. We are in close contact with especially the cover supplier. They have restarted production and guaranteed that production is accelerated for DekTec.</p>
